

Android Wear

Google's smartwatch platform is relatively new, like most other smartwatch platforms, but it has already seen significant highs and lows.

Android Wear saw the light of the day at Google I/O 2014, and since then, a lot has happened in the world of wearables. From being declared dead to being upheld as the harbinger of a completely new device category, tech companies – main-stream or otherwise – have dabbled in this product segment and led it to where it stands today. Google had no small role to play in that, with Android Wear being their smartwatch equivalent of the Android OS. And by equivalent, we mean to say that Google themselves did not bring out a wearable device – rather, they followed the same approach as with the
