

Nexus Phones

The first established bastion of Stock Android Phones

A h, Nexus. Google's physical representation of their visions of Android. All the Nexus devices are considered as 'Reference Designs' for other manufacturers and the public to know what exactly Google hopes Android can do. Each Nexus device was the result of the collaboration between Google and an OEM (or Original Equipment Manufacturer... think ASUS, LG, or Samsung) with Google describing the kind of hardware they need to supplement their software and take care of all the design work while the OEM took care of the nitty gritty details such as actually manufacturing it. Each Nexus phone brought with it a new Android release at launch, much like Apple. (This is a comparison you'll see throughout the book. The biggest two tech companies share a lot of similarities) The Nexus line of phones had 8 devices before being discon-
