

tinued in 2016, and while all of them shared the same core philosophies, each of them were very distinct and unique devices.

The Evolution of the Nexus

A couple of years after the unveiling of Android in 2007, rumor mills around the world started churning out possible reports of a ‘Google Phone’. Sure there was already the ‘Android Dev Phone 1’ that Google was selling but let’s be real – that was just a rebadged, unlocked HTC Dream. The possibility of an actual phone developed by Google themselves was very exciting. And in January, 2010, that possibility came true and Google unleashed the first Nexus device on the world. Here is a brief (or not so brief) history on all the Nexus phones since then

• Nexus One

The One that started it all, this was the first phone in the Nexus line up. It was released in January, 2010, as a joint collaboration between HTC and Google (A logical step since the success of the HTC Dream). It was a svelte, premium looking phone, two seemingly interlocked pieces of the touchscreen module in dark grey with a larger light grey module housing the buttons. And the best part is, they managed to keep the thickness within 11.5 mm! For a comparison, the Nexus 6 is 10 mm thick. (But this isn’t really a fair comparison). The Nexus One originally launched with a 3.7 inch AMOLED
