

several versions of the phone for different countries, some with the WVGA super AMOLED display and one with the LCD. (Guess which one India got? The sole LCD of course). On the inside, the Nexus S had a Exynos 3110 SoC with a Cortex A8 processor coupled with 512 MB of RAM. The internal storage got a huge bump up to 16 GB however, but the microSD card slot disappeared. The Nexus S was the first phone to be shipped with Android 2.3 Gingerbread, setting the tradition that every new Nexus device should ship with the latest and greatest of Google's software. Interesting piece of trivia, the Nexus S was the first smartphone certified by NASA to be taken into space via space shuttle as a part of the SPHERES experiment. (That seriously has to be best marketing line ever)

The Nexus S had a lot of new features going for it, from the curved! Screen to a NFC chip built into the back of the phone. And it was received with much more positive reviews than the Nexus One. Reviewers praised Google and Samsung for all the bug fixing (especially on the GPS side) and the fact that using the phone was a seamless and thoroughly lag free and enjoyable experience. It quickly became one of the best Android devices on the market, even beating out other phones made by Samsung. It was also well liked by the developer community, to the extent that it even has an unofficial Android 6.0 Marshmallow ROM! Talk about phone loyalty.

• Galaxy Nexus

Savouring the success with the Nexus S and the partnership with Samsung, Google presumably didn't want to fix what is clearly not broken, built the third Nexus phone with Samsung again. The Galaxy Nexus was launched on 19th October, 2011. It flattened down some of the curves but still hung onto that "Feels Good in the hand" form factor and again, plastic and glass predominated throughout the build. It had (for the time) a massive screen, 4.65 inches diagonally with a screen resolution of 1280*720 (HD) and a pixel density of 316 ppi. It again featured an AMOLED panel

Samsung sure does love its curves
