

but thankfully, no LCD variants were released. On the inside, it was powered by a Texas Instruments OMAP 4460 SoC with a dual core Cortex A9 processor coupled with 1 GB of RAM and either 16 or 32 gigs of storage.

The screen still had that slight curve and the fact that it was one of the first 720p HD screens on the market made for a compelling reason to buy it. The fact that it was also the first phone to ship with Android 4.0 Ice Cream sandwich, made the graphical user experience truly eye-popping. Added to the performance tweaks and whole new features that Ice Cream Sandwich brought in compared to Gingerbread, and the fact that no other smartphone had Android 4.0 when the Galaxy Nexus launched, quickly claimed the Best Android Smartphone award for it again.

This wasn't to say that the Galaxy Nexus was flawless. The camera performance was mediocre and the battery life was abysmal (perhaps due to the huge HD screen) and some connectivity issues, especially for LTE still plagued it. But on the whole, the Galaxy Nexus was a great phone and the fact that Google delivered on it's phone two years running made the future of the Nexus line so much brighter.

- **Nexus 4**

Boosted by the success by the last two releases, Google had to be very careful about their next release. The success of the Nexus 4 was going to make the
