

A very nice polycarbonate

the trade off in the camera department – thereby disappointing many of the more mainstream people who got interested in the Nexus line after the Nexus 4.

The Nexus 5 was a great phone for geeky people who'd find features such as camera performance unneeded if it

meant extra processing power but when they are a small minority in the purchasing space, it meant that the Nexus 5 wasn't quite the even bigger blockbuster hit that Google hoped it would be. It still sold like hotcakes however especially when they introduced the White and Red colors to generate more interest, and people who were miffed at first were still content enough to wait for the next installment.

Meanwhile, over at Moto, Google also released phones that catered to the lower end. While these aren't true blood Nexus devices, they are still indirectly from Google. First some backstory – Google purchased Motorola on May 22, 2012 ostensibly to safeguard the plethora of patents held by the company. They paid a princely sum of about 12.5 billion dollars and for the first couple of months, even Google Analysts were scratching their heads as to why exactly the acquisition took place.

And in August, 2013, Google dropped a surprise bomb on the world in the form of the Moto X. While the Nexus 5 was squarely aimed at the developer community with it unexpectedly receiving mainstream interest, the Moto X was designed for solely the mainstream. Featuring a beautiful 720p AMOLED screen with 316 ppi and a gorgeously tooled exterior with dimples (which you could customize to your liking to over

Moto X in Cyan Blue
