The end game

The Chrome device ecosystem almost still echoes Sundar Pichai's initial message of the device existing for the software to work. While that might be true, that has always been Google's way of gaining traction. Android wouldn't be even close to what it is today if it wasn't for Google making it available for any and every manufacturer to implement in their own way. And with Chromebooks and Chrome OS, we are seeing a similar trend where particular use cases are being completely overtaken by Chrome devices. Pretty soon, it wouldn't be a surprise to see developers coming up with ways to bring everything that has been missing on the the ecosystem, software-wise, to Chrome OS. That time cannot come soon enough. **d**
