

Chrome OS and Andromeda

Time to get the rumour mill spinning and see what Google might have up their sleeves!

In 2009, Google told the world about a little study they did. Most of our computer usage is to use internet. They collected data from internal testing and some employees even monitored their own usage patterns. This led to the developers conceiving a whole new OS based on their web browser Chrome. On 7th July, 2009 Google announced Chrome OS, a Linux based system that uses the Chrome browser as its central user interface. It utilizes web applications and the majority of the storage would be based on the cloud. A brilliant idea, but for a world which wasn't ready for
