

Chromecast Audio

it had other problems, music quality while streaming wouldn't be one of them. It also had a AKM AK4430 192kHz 24-Bit DAC built in.

• The Chromecast Ultra

The Chromecast Ultra, while looking very visually similar to the Chromecast Second Gen, featured improved and stronger hardware. It was released on November 6, 2016 and it was aimed primarily at streaming 4K HDR content. Unlike previous Chromecasts which could be charged via micro USB, the Chromecast Ultra had its own specific power supply, possibly to power the stronger hardware in it. It also had an Ethernet jack built into it to ensure that the internet connection was fast enough and stable enough to actually stream 4K HDR content. It retails for almost double the price of a regular Chromecast, at \$69 (₹4,400 approx).

Chromecast Ultra

Why do people buy Chromecasts?

For many, Chromecasts represent the easiest way to getting a browser screen on their TVs, or even as a standard cable TV replacement. Then there's the fact that it's great for entertaining guests and it's got a low price tag. It's only logical that the Chromecast would become a bestseller. Buying a Chromecast meant that you could just stick with your old TV or speakers and not spend a whole lot of extra money trying to get a newer smart TV just to stream content
