

Google VR/AR

Google is reality for most of us, and now
Google wants to be more than that...

After everything you've read so far, you know that Google has a finger in just about every pie there is to put a finger in (Google has a lot of fingers apparently). Of course, one of those pies is Virtual Reality and Augmented Reality, which we'll be tackling in this chapter. Let's start with VR.

Google VR

Daydream

Until Daydream, all Google had to show for its VR progress was Cardboard (which we'll get to in a bit). It was only in October last year (2016) that Google first announced the Daydream VR headset, which they dubbed Daydream View. It was announced alongside the Google Pixel, the first official Daydream-ready smartphone.
