

say controller, it honestly looks more like a TV remote. But it's got motion sensors built into it, so there's other VR applications as well, primarily gaming. Its other intended purpose is to make navigating the Daydream UI easier as well.

- **Daydream Home**

Daydream's UI is called Daydream Home; this is your VR hub, from where you browse and boot up all of Google's VR content. It's also connected to a specially curated Google Play Store with VR specific apps and content.

- **Tilt Brush**

Think MS Paint, but in 3D. That's what Google's Tilt Brush is. The functioning is simple, you put on the VR Headset, and you're in your canvas now.
