

## Google and the web

What began as a Ph.D project for Larry Page and Sergey Brin eventually brought about Page Rank to the internet – a completely new, and better way, to index the internet and show websites as search results. While they did not invent the search engine itself, the humble Google homepage is now synonymous with the act of searching something online. In fact, ‘Google’ was included as a verb in the Oxford English Dictionary as well as Merriam Webster in 2006 – with the official definition being on the lines of *using the Google search engine to search for something online* – though many use that verb even when using other search engines.

Speaking about the humble homepage, the design that many associate with the clean, no-nonsense approach that Google has with its services today, might have been originally simple due to Page and Brin’s unfamili-

Google has long surpassed the boundaries of the web

arity with HTML! Another similar simple decision – selling advertisements based on keywords – was almost certainly what put Google on a certain path to growth and success. Tracing each milestone – online and offline – that Google has achieved in the past 19 years would be a humongous task and a not so useful lesson in history (Don’t believe us? Check this out: <http://dgit.in/GooglePrdcts>). But what is significant, is how almost all of it links back to one thing – your Google account.

## The one account to use them all

Many of us were introduced to the Google Account with Gmail. Among the initial offerings from Google, this was pretty much the first one that
