

phones. While the Project Fi device adoption rate is higher than Google Fiber's expansion rate (3 devices were added in 2017!), it is still painfully slow. And just like Google Fiber, we'll just have to watch hungrily as it slowly expands in the western hemisphere and finally reaches us. Until then, there's always Jio!

## Google Station

At last, some news that's applicable to us! Google's all encompassing eye definitely hasn't forgotten our burgeoning 1.4 billion mass. Under the banner of making India Digital, Google has partnered up with several com-

Current Google Station locations in India

panies in India to provide high speed Wi-Fi connections free of charge in several railway stations across the country. Aptly named Google Station was started in January 2016, in our very own Mumbai Central station. Partnered with the public sector company RailTel, Google has been steadily expanding the list of connected stations and as of now, over a 100 stations all over the country have

Google Wi-Fi installed in them. And thankfully, expansion still seems to be going strong. Even more excitingly, Google, RailTel, Larsen and Toubro and Pune Smart City are all partnering up to bring high speed Wi-Fi in most public areas of Pune as part of the Smart City project. If this proves a success, we can expect Google WiFi in other major tier 1 and tier 2 cities within the coming few years! Quite an exciting prospect, don't you think? **d**
