

Play

A.K.A the best umbrella term for all the Google Apps

Unless you are an iPhone user or your phone is running an Android Open Source Project ROM, you most definitely have at least a couple of Google Play apps preinstalled on your phone. And if not, you still (mostly) have the option of downloading most of the apps from whatever app store that's available to you. Google Apps while being pretty diverse all share some common elements. First and foremost, they are all free – Google just wants more data about you in return we suppose. The apps are all usually minimalistic and have a clean and tidy UI that's typically easy to use and are mostly very well thought out and designed. The cloud features an important role here and most of your saved data is automatically uploaded so that you don't end up losing it by accident. You have a Google App for everything from reading books (Play Books) to typing in Hindi (Indic Keyboard). While this by no means
