

Gmail straight to the drive. When it initially started out, Drive services just included Docs, which was, for all intents and purposes, a downsized version of Microsoft Office. This meant that you could only backup documents. Nowadays though, you can backup everything under the sun. Google offers up 15GB free, with plans ranging from \$2/month to \$300/month, and storage spaces up to 30TB.

If you can't live without your music, all you have to do is sync your music library with Google Drive and you can stream it from anyplace on the globe that has a working internet connection. If you use Chrome,

The sheer number of utilities that Google Drive offers – from creating and sharing docs, to editing photos and converting videos, makes it almost like a closed platform not requiring outside help to solve any data related issues

you can download a DriveMusic plugin that allows you to directly stream music.

You can also use Docs to convert PDFs into editable text, and use a new and improved productivity suite to voice type, create better templates, and use their built-in research tools. Even though Drive itself is a marvellous service, it can be customised even further with the Apps that the Chrome Web Store has. You can edit photos, convert videos, and add a huge amount of functionality to make it your own private workspace. You can also share Docs, PDFs, photos, music etc and collaborate with other people through Google Drive, making it almost like a business minded social network. But it is much more than that.
