

Google Docs : The perfect work environment

For the longest time, Microsoft Office was the all-knowing, all-seeing ruler of the enterprise productivity suite software market. Microsoft Word is synonymous with text documents, Excel with spreadsheets, and Powerpoint with presentations. Google made the combination of Google Docs, Sheets, and Slides to compete with Office. It is a lesser being when compared to the immense functionality that Office gives the user, but that is simply because it is made that way. It seems to have been designed with the 80/20 rule in mind, that is, 80% of users won't need more than 20% of the features. While the sheer number features might be fewer, it has a different purpose in mind – to create an online, collaborative workspace.

The Google offices have recreational rooms and sleeping rooms so as to give out the feel of a out-of-home work environment. Google Docs takes that

The collaborative editing is akin to sitting and brainstorming in a conference room with a whiteboard and a marker, but in the comfort provided by your home.
