

such a system is having constant access to all your valuables from any place on Earth – much like the leprechauns of yore. Google Drive's news for the future has been sparse at the moment, with most of the evolution happening without the user actually noticing. There was a mountain-out-of-a-molehill moment when Google announced that the Google Drive desktop app will go defunct by March 18, 2018. The news spread like wildfire, and there was chaos amongst their users until it was clarified that the app's replacements - Backup and Sync are already available.

The application for Google Drive will soon become defunct. Instead, Google has already introduced its replacement

As for the actual future of cloud storage. Well, it is now aiming to completely eradicate the business office, because pioneers claim that staying at home and working effectively from an environment that is comfortable is more productive for a company as a whole. Add the fact that an interactive cloud storage platform will act like a whiteboard where countless employees will be able to use their marker pens, and could lead to a formula where the 9 to 5 workday isn't needed. But what the future brings, nobody knows. We expected flying cars and rocket packs, and we got cloud storage. **d**
