

recognition algorithm works like a charm and will list out all the pictures that the selected face appears in thus making it easier for you to delete them at once. The new suggested sharing feature now has a quick way to auto-share the pictures with the people inside the picture. Yes, it's a bit creepy but using it is optional. Phew!

Google Photos Assistant:

The Assistant inside Google Photos is like a virtual robotic helper that keeps fiddling with your media in the background and automatically creates: albums, stitched panoramas, GIFs, collages, videos and even applies filters. It uses machine learning to detect better quality photos from your vacation and create an album with the best snaps where the album will have the best looking shots from the most popular landmarks. It's even clever

enough to understand the place where the picture was taken for non-geotagged photos by using a combination of computer vision and geotags (where available). Finally, the 'Rediscover this day' functionality inside Assistant automatically brings up a group of pictures taken on the same day in the past years for some much needed reminiscing.

Auto album for rediscovering the day from the past

Security and Privacy:

Photos and videos stored on the service are private by default and they stay that way until you decide to share them. It should be known that anything stored inside most of Google's services go through algorithms that are in place to make sure that you aren't using their services to upload illegal data. As long as you are not in breach of these policies, your media is securely stored under

many layers of safeguards. Throughout its history, people have raised concerns over privacy of user data questioning Google's own motives for creating such a service. The major point of worry being what sort of laws would allow Google to hand-in user data to Government organisations. To see how Google protects user privacy, check out this video: <http://bit.ly/1dyn96Y> Google Photos users have always wanted a way to hide their more private
