

Why does it still exist and is there a future?

Although Google+ failed to make a huge mark as a social network, what it surprisingly did is it gave rise to a set of useful services like Google Photos. Many have even regarded its design as easy on the eyes. Critics have often thought of Google+ as a test-bed for vetting interesting ideas and bringing them to the fore. If that's what Google+ has been capable of in the past years, it's not really a failure in the true sense, is it?
