

This is how YouTube looked like back in 2006. Adobe Flash was its companion for over a decade, but it has since run out of time.

Recently, YouTube also hastened the death of its partner in crime - Adobe Flash, by completely ditching it for HTML5. Adobe themselves predicted it when in 2011, they killed the Flash Player for mobile, saying that HTML5 was the future. HTML5 allows YouTube to bring its videos to devices that don't support Flash, like the iPhone. This idea was first floated in

It is hard to imagine how a single triangle enclosed within a red rectangle can symbolise the entirety of online video sharing, but YouTube has made that happen.

2010, and as the technology developed both in user and product, YouTube transitioned like it always does. If it were an anthropomorphized creature capable of human emotion, it would shed a tear of nostalgia. But it isn't, and it understands that the only way forward is forward.

And so here we are. YouTube is now the 2nd most popular website in the world, beaten to the top by just its parent company, Google. What started out from a dinner party video, and travelled through the realms of a dating company, has eventually become the premier video sharing service in the world. Nobody, not even the three creators foresaw such an eventuality. Indeed, it could be a mistake, a tear
