

Experience amazing wonders of the world via Virtual Reality

Advantages

The advantage of Google Expeditions is that students and researchers can navigate deep into Virtual Reality environments to experience 360 degree adventures. The app will motivate students to engage in practical learning.

Quirks

The main problem with the app is that you need to make use of a VR viewer or headset to experience the visual effects. The Google Cardboard viewer is not yet available in India but you can purchase other third-party headsets. However, you will not be able to know whether the headset will be compatible until you test drive it. The use of virtual reality headsets for an extended time will probably result in eye strain.

Conclusion

Google Earth enables you to explore the globe and locate places anywhere on the world from anywhere in the world. If you look at Google Maps, it helps you navigate from one place to another with helpful suggestions. Google Street View provides access to premium quality images in a 360 degree animated format, and lastly, with Google Expeditions, you can use Virtual Reality to have a truly immersive, exploratory experience. These geographical services and tools can be quite helpful to you in your daily lives. Just Google Maps in itself is extremely useful when you're travelling
