

With the new Pixel and Pixel XL announced last month, and the surprise crowning of DxOMark of the Pixel XL as the best smartphone camera in existence, people are itching to get one of their own. Before we get to the current generation Pixels let's look at some predecessors.

The OG Pixel (and its bigger brother)

The world was plunged into sorrow when Google announced that it won't be making any more Nexus devices, bemoaning the loss of some great stock Android phones that were incredibly bang for buck. At least until suddenly, a ray of hope sprung up. Rumors were abound that an all new phone, wholly made by Google was on its way. While historically, the Nexus phones were also Google products, a lot of similarities between a Nexus Device and the

Such Colors, Much Wow

OEM's (Original Equipment Manufacturer) other devices did exist - for example the original Nexus 7 and the Asus Eee Pad MeMO ME370T. And with these similarities, also came the limitations. Google couldn't really express what they felt Android should feel and run like if everything on the hardware front was already pre decided. And hence, the Pixel line was born. Everything in totality, from each hardware component down to the
