

third party developers and manufacturers, when it comes to developing or manufacturing for its Daydream platform. And Google has also incentivised adherence to these guidelines. For instance, only apps that follow the Daydream requirements will be certified as Daydream apps on Google Play. And apps that are certified as Daydream apps will be easier for Daydream users to discover. Google has specified things like using a neck model, mandating user initiated camera movement, a stable horizon line and more to ensure a great experience for a Daydream user. Checkout <http://dgit.in/DydrmmApp> for a full list of requirements.

Similarly, Google has also defined a number of recommendations for hardware being developed for the Daydream platform. Among other things,

Doctors are now using VR to detect and treat injuries quicker.

for a phone to be declared Daydream Ready, it needs to dedicate processing power entirely to the Daydream mode in order to reduce latency and prevent VR sickness. Apart from Google's Pixel range, flagships from Samsung are also part of the 'Daydream ready' certified range of smartphones. Check out <http://dgit.in/DydrmmRdy> for a full list of Daydream ready smartphones.

Internet Of Things

Another buzzword in the recent times, the internet of things is essentially the complete network of devices, vehicles, lights, alarms, and even refrigerators that are embedded with, among other things network connectivity which enable these objects to collect and exchange data. By one estimate, the world of IoT alone will consist of about 30 billion objects by 2020.
