

Don't get us wrong - G Suite almost entirely comprises of the same things that you use as a standard Google consumer, namely Gmail, Hangouts, Calendar, and Google+ for communication; Drive for storage; Docs, Sheets, Slides, Forms, and Sites for collaboration. Additionally, G Suite users get the benefit of having custom email IDs instead of @gmail.com. Additionally, depending on the plan, G Suite also offers an Admin Panel and a Vault for user and service management. Along with the custom email ID, option for unlimited cloud storage and more, G Suite affords overall greater control to a professional setup.

As of January 2017, G Suite has 3 million paying businesses, and 70 million G Suite for Education users. In fact, the segment has been successful enough for Google to go ahead and launch a hardware product, the Jamboard - which is a 55-inch digital whiteboard connected to the cloud. The G Suite marketplace offers applications and cloud offerings customised for business needs. On top of that, Google has been adding newer features to G Suite, like the new Hire section lets admins manage the hiring process.
