

At the school level, there is often a demand for an all-in-one tutor who can cover every subject - the subtext is that they must be exceptionally good at tutoring for math and science (yes, that craze is still around). There's often stiff competition in these markets from the typical 'XYZ Classes/Coaching Academy/Tutorials', but this is by far the easiest scene to break into. What ends up happening at these mass coaching classes isn't very different from what happens in the schools that they seek to teach better than - high student/teacher ratios, mindless barrages of tests and exams, and students sleeping at the back of the class.

The '11th and 12th' or +2 level students in India tend to have been monopolised for science and commerce by 'integrated' programs that teach them board exam syllabus as well as entrance exam stuff. As students in this age group are usually pressed for time, these 'integrated' programmes have a huge and unfortunate advantage that often turns them almost hibernatorial for two years. To break into these markets will require you to have a good and up-to-date knowledge of the exams and the extensive syllabus they usually cover. Offering subject- or topic-specific tutoring for this level is one way out of this.

At the undergrad level, engineering (mainly computers), finance (which a surprising number of engineers want to get good at), accounts, and on

Tutoring can bring smiles to a kid's face and money to your pocket.
Tutoring is the ultimate solution.
