

you don't know enough - you are probably right. Make sure you're comfortable enough with what you'll be tutoring to sell yourself, or, well, you won't.

Your first tutoring session might be a little clumsy, or embarrassing, or you might even end up saying something completely wrong - but don't fret, you'll get better. Starting small is always a good idea. Teach the kids in your neighbourhood, or do a tentative lesson via an online platform. Do note that online platforms like Chegg are getting incredibly selective about who gets to tutor with them - they often ask for proof of education, as well as for a number of evaluative tests or interviews.

As you build experience, confidence and ability, you might just find your reputation growing faster than you can handle - it isn't uncommon for some 'celebrity' tutors to quit their jobs to tutor full-time after developing reputations as a 'maths doctor' who can 'cure' a child of arithmophobia.

Nobel-winning physicist Richard Feynman was renowned for his ability to explain complex concepts simply. Good tutoring requires unconventional thinking

If your skillset is somewhat more advanced, such as at the collegiate or professional skills level, you may have to restructure your approach and design tutorials or short workshops that teach people what you know. Online or freelance tutoring is also a good way to build the confidence needed to take on serious full-time students at such levels.

But before the castles in the sky get too heavy, remember that you can't go wrong with a poster up in the neighbourhood, or a trial session with a relative's child.
