

Inject adsense code with plugins and earn revenue instantly

security pluggins is als very important. Some of the important plugins which you should install and activate are Akismet, AmazoLinkenator, Change Author, Google XML Sitemaps, GTranslate, Image Zoom, Inline Related Posts, NextScripts Social, Nofollow for external link, Shortcodes Ultimate, Social Warfare, Source Affix, WP Product Review Lite, WP Statistics, WPtouch and Yoast SEO.

Writing content

To compose a new blog article, you need to select Posts | Add New option and add the content you have written. It is ideal to copy and paste the content from either Notepad or Word. Moreover, the installation of Grammarly Chrome extension will help you to avoid spelling mistakes and errors. You should not forget to file your article under relevant categories, add tags including addition of a featured image. To avoid copyright issues, you should embed featured images sourced from Flickr, Pixabay or Google Images labeled for reuse. The addition of images, videos and twitter feeds will enhance the quality of the content.

Learn how to grab images for your content

Google has made it mandatory for all websites and blogs to incorporate SSL for enhanced ranking in search engines. You can generate free SSL certificates for your blog from <https://www.sslforfree.com>.
