

Blockchain Variations

Even as a single entity, blockchains are enough confusing. But the fact that there are different *kinds* of them... Well, we got your back.

A Quick Primer

Blockchain, or generally known as distributed ledger technology, is an encrypted decentralized method of record-keeping. The system enables all the members to keep a copy of the ledger. A change to the ledger is only recognized when a majority of its members verify the change. Upon verification, a new block is added into the chain with the new data. This
