

as WooCommerce available for WordPress. If you search the official plugin directory on wordpress.org, you will find plenty of other similar plugins. You can also install open source e-commerce PHP-based scripts such as litecart.net, opencart.com, abantecart.com, maiancart.com, open-esbop.com, litecommerce.com. You can also make use of web-hosted software such as prestashop.com and open-esbop.com but this is not an ideal solution professionally. You will be required to pay a fixed amount per month and upload products to their site. However, you will find it difficult to fix pricing because the currency will be in USD but there will be an option to change the currency depending upon the script.

Selling via e-commerce partners

With the rapid surge in e-commerce platforms, you need not have to worry about the complicated initial setup. If you complete the required formalities as laid down by the ecommerce retailers and have products in stock, you can establish partnership with them. In this section, we will outline the steps required to establish your shop with popular ecommerce companies.

Flipkart

To start selling on Flipkart, you need to visit http://dgit.in/flipkart_seller and complete the registration process. In addition to GSTIN ID, Pan card, and bank account, you need to have a list of five unique products. Once you have these details, you should select Start Selling button. The first step is seller registration followed by feeding of required registration numbers. You will be prompted to upload scanned copies of the documents.

Flipkart team will establish contact with you after registration and will guide you with the further course of action. Flipkart will process payments within 7 to 15 days of sale. You can also install Flipkart Seller Hub Android app available on Google Play Store to manage your activities related to selling.

Flipkart Seller Hub helps you to get start your business
