

Inventory management is the biggest pain and hassle you will encounter as you grow but it's also a symptom of a healthy business

tory for shipping. This would ensure that you do not run out of stock even when you see a peak in your sales. Given that these are numbers you are setting for yourself, take the time out to revisit them once or twice a year to ensure that they still hold good for the amount of business you are currently doing. Tweak your 'minimum' every now and then, basis your requirements.

- If your goods are perishable, you will need to ensure that the stock you hold in your warehouse is always fresh. Even when it comes to non-perishable goods, almost everything will have an expiry date. A simple method to avoid being stuck with dead weight is ensuring that the first items in are the first items out. Stock new inventory at the back and keep the older goods at the front. Keep this cycle going. Your third party warehouse is probably already using this method.
- Having a contingency plan is as necessary as knowing CPR. You never know when you might need it. Picture this, you oversell your stock during a sales spike. Now you are left with no stock of a fast-selling good. Or even worse, holiday season is coming up and your warehouse partner does not have enough space to accommodate the extra goods that you know are going to go out during peak order season. Prepare yourself in advance for such risks that can cripple your business. Figure out what
