

Don't make users get out their compass just to navigate around the website

players in the market of devices, there has been a surge in the number of browsers that each device supports. Your aim is to make your website friendly for most browsers. Ensure that your website loads well and fast on everything from Google Chrome, Mozilla Firefox, Microsoft Internet Explorer, Safari and Opera.

While that takes care of your desktop and laptop woes, things are different for mobile phones and tabs. Ask your design team to ensure that your site is mobile-friendly, responsive and has an easy-to-use design on almost all leading handheld devices. Your site's mobile friendliness could help your search engine rankings. Now that is something you definitely want to capitalise on.

Understand and use the 'three click' rule. Ensure that the end user can reach their intended destination from your home page in a matter of three clicks or less. Any more and it means that your design is not really user-friendly.

Content that makes users content:

First impressions are usually the last impressions as far as your website is concerned. If the user does not find the content readable or usable, chances
