Shopping Cart Sagas:

Have you ever visited a Big Bazaar on a Wednesday. You will see customers pile stocks of goods into their trolleys until those poor trolleys can take no more. Now answer this question - have you ever seen one of them abandon this trolley at the cash counter before they could pay because the process was too complicated? Chances are no. Because it is as easy as standing there until it is your turn, swiping a card or paying cash and walking home with your newly bought goodies.

Things are different in the online world. Research proves that over 60% sales are sometimes lost at the checkout section of the website. This happens because the whole process of 'checking out' is a little too complicated for the user. There are simple ways to avoid this 60% and upwards number to become a little lower for your website. Do not have any hidden costs only to be discovered at the time of checkout. Any and all delivery costs are to be disclosed right at the beginning, probably on each page of your website or alongside products as a disclosure statement.

Another mistake you want to avoid is not telling customers whether a product is in stock or not. If they find out only when they are checking out, chances are they will abandon the entire shopping cart and all its contents. You may also want to keep the navigation back from the shopping cart to the main site simple. Allow customers to, with a single click, go back to the
