

Security in Laravel

A thorough look at various methods to achieve security like authorization, authentication, hashing, passwords etc. while creating form or web applications.

To quickly revise what we have learnt so far, Laravel is an open source PHP web framework created by Taylor Otwell which is used to create any kind of web application following the MVC (model-view-controller) framework. Laravel attempts to take the pain out of development by easing common tasks used in the majority of web projects, such as authentication, routing, sessions, and caching. An important part of designing web pages is security and authentication. There
