

Laravel's Cashier package makes payments via your web apps an uncomplicated affair

## Horizon

Horizon is all about queues. It helps create and control a beautiful code-written and dashboard-controlled configuration for your Laravel powered Redis queues (Redis is a fast, open source, in-memory key-value data store for use as a database, cache, message broker, and queue). Horizon is capable of and will help you in maintaining key metrics of your system such as runtime, job throughput, as well as job failures if any. All of this data is stored in a single, simple configuration file that will stay in source control. This will mean that it enables your entire team to collaborate on it.

## API Authentication (Passport)

Laravel makes the whole process of API authentication a breeze with its official package Laravel Passport. This extremely popular package is able to set up and provide an entire OAuth2 server implementation for your Laravel app in a matter of minutes. OAuth is an open standard for authorisation and can be used by any developer based on their needs. This is what allows your client to have 'secure delegated access'.

## Scout

Need to add full text search parameters to your Eloquent models? Your answer comes in the form of Scout, another one of Laravel's featured packages. By applying the use of model observers, Scout can keep your search
