

of ten of the most recent projects you have worked on. If the required file you want to access is beyond the ten, the Open... button on the bottom lets you browse your system for files.

Lower left of the previous section is all about resources related to the software. These are categorised into two sections - UI Kits and Resources. UI Kits has a list of web links to pages where you can download the files that contain graphic elements of the respective platform. The Resources section provides links to general information about the software.

Finally, on the lower left corner is the tutorial section. The Begin Tutorial button opens a pre-designed project that walks you through the basics of the software. The basics only.

Difference between Windows and Mac versions

The only difference between the two version is the way they present the main menu.

On the Windows side, the main menu is all tucked into a hamburger menu. The button is the upper rightmost interactable object and looms over the software, wherever you go.

The first four options inside this menu are those found in the Start Menu - New project, Open..., Open Recent and Get UI Kits and below them is the option to access your CC libraries.

Then comes the file save section with Save, Save As... and Revert to Saved. The last option simply reverts your file to your most recently saved state, after asking for your confirmation.

Then comes the Export option with its own list. Going from bottom to top, All Artboards... exports all artboards, Selected... only exports the things that are selected and Batch... only exports items that you had marked for batch export. Import allows you to import an image file into the project.

Share lets you create a web link to your project that you can share with others. This requires an active Adobe account. Manage Published Links... takes you to a webpage where you can manage everything that you are sharing with links made through the Share option.

On the very bottom of the menu is Help. The first four options in the submenu are the same as the Resources section from the Start Menu. Below these four is XD Help... which is the link to the same webpage as Learn & Support.... XD Tutorial launches the same pre-designed tutorial project as from Start Menu. About XD opens a message box that gives version information, credits and legal notices. The last three
