

options open up Creative Cloud launcher for account management and software updates.

On Mac, all the option names and functions are same as that of Windows, except they are separated into their categories. Instead of everything being in one place, each group has its own drop-down menu. All group headers are placed horizontally right next to the Apple menu button.

## Design Mode

This is where all the assets are placed in their respective places. And all the screens of the UI are divided into Artboards. It is accessed by clicking on the Design tab header on the upper left area, right next to prototype type.

All the visual pieces of the UI puzzle are placed in the Design Mode.

## Toolbar

Running down on the leftmost edge is the Toolbar. As the name suggests this is where all your basic tools are housed.

On top is the Select tool, that lets you select, simple. Beneath that is the Rectangle tool that enables you to draw rectangles. Following this are similar tools - Ellipse and Line. Then comes the Pen tool that allows creating curves using vertices and tangent handles. Text tool creates a textbox to add text. Artboard tool creates a new artboard in the direction you click.

Zoom tool allows both, zooming in steps and zooming in on a region. Mouse clicks are for step zooms and hold and drag are to zoom into a region.

The first option on the bottom of the Toolbar is Assets, a place where you can store both individual and grouped objects to used repeatedly across the project.
