

can create content using Text tool. In the same way, Adobe XD also ships with several tools that can be used for the purpose of designing prototypes. You can also change the appearance of the tool by modifying the values using the properties Inspector panel. In this chapter, we will examine all the tools available with Adobe XD in detail including a few advanced concepts.

Kick start your Adobe XD design using integrated layouts. You can select a design template for which you want to add tools from the Adobe XD startup splash screen. You have to select a template for the relevant device such as iPhone, iPad, Android mobile/tablet or Surface Pro tablet or for the web. It is also possible to define a customised size by selecting the Custom size option. The splash screen also provides direct access to UI Kits and resources such as documentation and help files.

Drawing tools

With the help of the tools such as rectangle, ellipse, line and pen tools, you will be able to quickly draw simple icons, texts and graphics. The selection tool enables you to select specific lines, shapes and objects for editing purposes. It is possible to merge shapes in various ways not only to create compound shapes and objects but also to mask portions. The options are unlimited and it's up to you to decide as to how to work with the Adobe XD.

Rectangles

You can draw rectangles by selecting the Rectangle [R] tool from the left toolbar and dragging it diagonally until the desired size is achieved. You just need to hold the mouse and then drag the tool as per your requirements. The properties Inspector on the right side displays the measurement-related parameters of the rectangle. Adobe XD uses same radius for all corners. You can also specify your own values by selecting Different radius for each corner option.

To draw rounded rectangles, you just need to drag the radius editing handles (small circle-shaped icon with a dot) appropriately until the specified shape is visible on the design window. If you drag the handles upwards, the rectangle can be modified to the original shape.

To fill rectangle with a colour, you should select the Fill property and select the relevant colour from the palette. It is also possible to

It is possible to draw squares and rectangles by holding down the Shift key while dragging from the top and until the specific size is created.
