

change the border and shadow colours by selecting the desired colour. You can easily blur either the background or the object itself. For instance, draw a rectangle shape, fill it with a colour of your choice and set the object blur option. You will notice the difference.

You can also make use of the Rectangle tool, to draw squares and rounded squares of various sizes. The steps required to draw a square is the same as described in the rectangle section. Moreover, the property values are same for both rectangle and square.

It is possible to adjust the radius of a single corner by holding the Alt key and dragging the mouse by clicking the radius editing handles inside the shape. You need to use the Option key if you're using a Mac. The Property Inspector helps you to edit the values of each corner radius. You can easily adjust the radius of all the corners by clicking the corner radius and dragging the mouse. After that, you need to edit the radius value from the Property Inspector.
