

Ellipses and circles

To draw an ellipse, you should select the Ellipse (E) tool from the left toolbar and drag diagonally until the ellipse gets the desired size. You can create a circle by holding the Shift key in Windows while dragging inside the design area. The property values are almost identical to that of the rectangle.

Lines

To draw straight lines, you need to select the Line (L) tool from the toolbar located on the left-hand side. You should position the pointer where you would like to start with, drag and stop at the location you want the line to end. As soon as you draw the lines, you will be able to view the width and height measurements being changed on the Properties Inspector. Moreover, you can increase the border of the line by providing a suitable value including the ability to change the colour. It is also possible to add a shadow and blur the line by dragging the slider. We would suggest you to draw a line and then play with the various properties.

Working with Pen

The Pen (P) tool located on the left-hand side of the toolbar enables you to draw inter-connected objects of various sizes using two anchor points. The tool will be in the form of a line but you can continue to draw on the design area until you achieve a desired shape. To work with the Pen tool, you should click on the tool from the toolbar and position it where you want the straight segment to begin and then click on it to define the first

Draw lines of various sizes with Adobe XD
