

play with the options available on the Properties inspector. Do you want to underline a text? You can easily do so by selecting the Underline option in the Property Inspector.

Talking about text formatting, you will find regular, semi-light italic, italic, semi-bold, semi-bold italic, bold, bold italic, black and black italic options. It is also possible to adjust the alignment of the content including

Text tool helps you to create content easily

the ability to fill text and border with colours. It is also possible to blur the background. The properties are identical to that of the previously discussed tools except text formatting. You can easily switch between point and area text by selecting a text object and toggling between the point and area text options available inside the Property Inspector.

To import content from text files, you just need to drag a plain text file onto your Artboard. The board will be loaded with the contents of the text file. It is also possible to drag a text file over a text component in a Repeat grid and this action fills the elements with the content from the file. Alternatively, you can simply copy and paste text content on to the Text tool inside the design area.

Working with Artboard

The Artboard (A) tool located below the Text tool on the toolbar helps you to work directly inside

To increase the font size of the Text tool, press Shift + Ctrl + > keyboard combination in Windows. Entering values inside the property inspector box won't increase the font size.
