

the relevant devices. For example, if you would like to create a user interface for iPhone X, you can select the relevant artboard and work on it. If you scroll down the Property Inspector located on the right side after selecting Artboard, you will be able to view the list of all the devices. You will have to select the relevant device to create the required design. As of writing this chapter, the Adobe XD artboard provides the list of all major Apple devices along with Android Microsoft Surface devices. Moreover, you will also find relevant artboards for the creation of web-based applications. If you select a device name, the relevant design will be placed on the design area. If you click on it, the design will multiply as an infinite loop. You can delete an artboard by selecting it from the Artboards section from the left

Create and work with a wide range of artboards

side. If you would like to delete in bulk, click on any of the artboard, press the Ctrl key and click on the artboard you have to delete. Please refer to the official documentation located at <https://dgit.in/artboards> for more information about artboards and grids.

Sharing

To publish and share prototypes, you should select the button located on the extreme top right side and select Publish Prototype. You will view a screen with four options including a field to enter the title. The Allow Comments and Show Hotspot Links are automatically selected by default. You can protect the prototype file with password by selecting Require password
