

option and providing the required password as per the rules described on the screen. You should select Open in Full Screen option if the link you share should open in the full screen mode. A shareable link will be generated upon selecting Create Public Link option.

You will view three options after the successful creation of the link. You can either open the link or copy the link

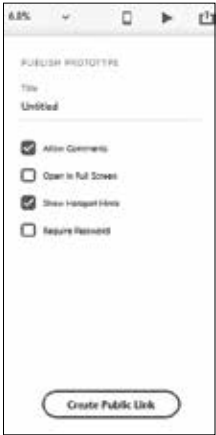

URL for sharing via email and other sources. Adobe XD also generates an embed code if you select Copy Embed code option. The Publish Design Specs option enables you to share design specifications based on web units. You can also manage published links by selecting the third option. Please refer to Chapter 11 for more information.

Menu functions

If you select the three horizontal lines (≡) placed on the top left-hand side above the Toolbar, you will be able to view options to perform common functions including export, import and sharing of prototypes. You can also access comprehensive help and tutorials related to Adobe XD.

Working with Repeat Grid

If you would like to create prototypes with repeating elements or content lists, you will have to make use of Repeat Grid functionality. The Repeat Grid module automatically changes a
