

the Asset Panel to be reused across artboards and screens. Heck, you can even use them across files.

The Assets Panel can be accessed by clicking in the toolbar, or press Command + Shift + Y (on Mac) or Ctrl + Shift + Y (on Windows).

To add to the Asset Panel, select the object and click on the 'plus' sign next to the asset type. E.g. if you want to add a colour, click the object with the colour (shape, text, icon) and click on 'plus' sign next to the colour asset in the Asset panel. Similarly, add to Character Styles and Symbols. Or right

Explore it, familiarise yourself with it, love it.

click on the object and select from 'Add Color to Assets' or 'Add Character Styles to Assets' or 'Make Symbol'. You can also select an artboard or a group of artboards and click the 'plus' sign to add all the colors and character styles from the artboards to the Assets panel. One object can be used to add all 3 types of assets. To delete an asset, select the asset in the Assets panel, right click (on Windows) or Ctrl click (on Mac) and select Delete from the context menu. Want to know another useful feature? Even if you delete the object you used to add to the asset panel, the assets remain in the panel to be used again.

To apply a colour from the asset panel, select an object in the XD file and then click a color in the Assets panel or right click on the colour, and select Apply as Fill. To apply a colour stroke (border), select the object, right-click a colour in the Assets panel, and select Apply as Border. To apply character styles from the Assets panel, select a text object on your artboard and then click a character style on the Assets panel.
