

not want to show in the design prototype. You can hide a layer to achieve this. Hover your cursor over the layer and you will see a few icons to the right of the layer name.

On the far right is the symbol for hiding the layer. Click on this to hide the layer. This object will not be displayed on your artboard. The preceding symbol locks a layer. Locked layers are not editable. The lock button will also appear next to the object on the artboard. Press this button again on the Layers panel or on the artboard to unlock it.

UI Kits

Adobe has provided templates to get you started. These are known as UI Kits. Out of the box, there are kits available for Apple iOS, Google Material
