

an area of the artboard that is not interactive, the interactive part is highlighted by an outline. Password required is self explanatory. You can keep your designs private and limited to only those who have the password. If you are working on a client project, this will always be used. The password must have at least 8 characters, and include one of each of these characters: A-Z, a-z, and 0-9. If you wish to change the password at any point due to security reasons, open the sharing menu, click in the password and type in a new password. Then you can either update the existing link or create a new link. To remove the password, simply deselect the password option. You can also add in a password at later date if you wish.

If you edit your design and want to refresh the URL that you previously generated, click Publish Prototype again and then click Update Link. When viewing a prototype in a mobile web browser, you can save a shortcut to it on the device's home screen. This makes the prototype feel more like a native application when presenting it.

Sharing with Developers

Developers need more comprehensive data from you regarding the design to turn it into a code. If you want to share the design with developers, under the share menu, select the option Share Design Specs. This feature shares the design properties automatically by creating a web link. Developers can see vital information like design flow, element height, width, size, alignment, relative spacing between two icons/elements, colors, and typography.

The first screen shows all the artboards and the flow or sequence of the design. To know the flow of the design, hover the mouse over an artboard and the wireframes connecting to the next screen can be seen. You can zoom in to a specific artboard or out to view the entire design. Zoom keyboard shortcuts are Cmd/Ctrl + Mousewheel, Cmd/Ctrl + +/- keys to zoom in or out and Cmd+O to reset zoom.

Clicking on an artboard or screen takes them to that screen where they can inspect the objects and elements of the design. Click on an object to see the details of the design spec for that object. The specs appear on a panel on the right side of the screen. Over here you can see the character styles, shape dimensions, colour codes in Hex, HSLA or RGBA. When you select an object, you also see its height and width coordinates. To go to the next screen, use the arrows at the bottom of the screen.

Similar to sharing prototypes, if you edit the design, you can either update the link or create a new link.
