

A will automatically give you the last artboard you had selected.

You can also click on the Artboard tool on the left panel situated just below the Text tool and then select a preset or draw your own custom size artboard.

Playing Around

On the left side is the Layer panel which shows the artboard. On the top left corner above the artboard is the title or its name. By default, the name is given as the preset selected and the sequential number of the preset. Double click on the title or the name in the Layers panel and give a name of your choice.

Select the artboard by double clicking on it or clicking on the title or selecting it from the Layers panel. You can now easily make copies of the artboard by holding down the Option key (Mac) or Alt key (Windows) and dragging it to the desired location. You can also select the artboard from the Layers panel and use good old fashioned Ctrl + C and Ctrl + V functions.

You can also select multiple artboards by

1. Using the select tool and clicking on the artboard by keeping the Shift key pressed
2. From the layers panel by using the Shift key or Ctrl key
3. Or pressing the left button and dragging it over the artboards you want to select. Remember to drag over the entire artboard or it won't get selected.

Dragging an artboard does not change the order in the layers panel. If you select and drag it from the Layers panel that will only change the order and not the actual position on the screen.

If you have any object or element on an artboard that you want to copy to another one, select the desired object, and use the CMD/ Ctrl + C and CMD/ Ctrl + V (Mac/ Windows) functions. You can also select them and drag them while keeping the Option/ Alt key (Mac/ Windows) pressed. You can also move an element out of the artboard to the gray area around it known as the pasteboard.

NOTE:

As you keep adding artboards, the screen will keep shifting to the right. To get back to the leftmost or the first artboard, double click on the icon to the left side of the artboard name on the Layers panel.

Property Inspector

On the right you will see the Property Inspector panel for this artboard which contains all the properties of the artboard that you might need to
