

as a group and bring in the top markers inside the box. As they say, there's more than one way to skin a cat. You can also use the line tool or pen tool or even a repeat grid to create the same flipped line. Group all the objects together, the box and the two lines and voila! You have an envelope icon ready.

Now let's look at logos. Say you want to create the Facebook logo.

Easy way out- Use Google Image search to find a reusable image of the logo and import it in XD.

Keep the logo ready for reference. It's a square blue box with the letter f inside it in white. Pretty simple right? Well, kind of. Draw a square (shift key) and fill it with the appropriate blue colour. Using the text tool, write the letter f with white fill. Drag the f on the blue square. You may need to bring it to the front by right clicking on the letter and selecting Bring to Front from the Arrange menu. Now there's a small problem. Try as you will, you just can't get the bottom edges of the box and the letter to be perfectly aligned. Fret not, enter Boolean operations. We will look at Boolean operations in detail in just a bit. Right now, keep some of the bottom portion of the text outside the box and select both, the box and the letter. On the Property Inspector panel, near the top, you will find four symbols next to Repeat Grid. They are Add, Subtract, Intersect and Exclude Overlap in that order.

Click on the Subtract operator. The bottom portion that was sticking out of the box has magically disappeared. But wait, there's another problem. The f is faded- it's not the bright white we want. Select the box (using boolean operators also groups the objects) and copy paste it. By default, the new box

Boolean Operators- small, innocuous icons but extremely useful
