

will be uppermost layer of the object. Ungroup it, select the fill colour to white and send it backward. Now the f is the bright white again. Don't forget to group it all again so you can just drag and drop the icon on any artboard. Add this logo to your Symbol Assets so you can use it anytime you wish.

Try creating other symbols and logos like the search icon (magnifying glass), profile picture icon, camera icon, etc..

Boolean Operators

Let's take a look at all the 4 Boolean operators. Create the first images on your pasteboard, select both the shapes and click on an operator. Create 2 overlapping ellipses or circles for simplicity.

Add to Shape Area- Merges shapes into each cutting other eliminating the underlying combined portion.

So this

Becomes

Subtract from Shape Area- Cuts out the area of the topmost object except the outline that passes through the below object.

Transforms into

Looks like a cool boomerang right?

Intersect Shape Areas- Removes all except the intersecting or overlapping area of the shapes

Is now
