

The image to be masked on the right and the shape to be masked with on the left

The mask placed on the image

The final result. Captures the evil look perfectly doesn't it?

object and for Mac, select Object > Mask with Shape; for Windows, right-click and select Mask with Shape. You will see only the object inside the shape remaining.

Again, if you ungroup it, you will get the original object and shape back. You can create a profile icon and use this tool to insert a picture. **d**
