

lect the blur option from the property panel. In background blur, you can also select the blur mask (the shape on top of the original object) and delete it.

The other effect you can play around with is the Shadow effect. Select a shape or text or object and select the Shadow

box on the Property panel. Adjust the position using the coordinates X and Y. Adjust the blur (B) which specifies the distance from the edge of the shadow where you want any blurring to occur. Change the default colour of the shadow from the colour picker. To remove a shadow simply deselect the shadow option. Maybe this will look good on the Login button in the Login artboard? **d**

This is what the final project looks like.
